PROFESSIONAL SUMMARY

Full Stack & System Engineer with **3 years of hands-on experience** architecting scalable web applications, distributed backends, and containerized AI production pipelines. Specialized in **React.js, Next.js, Node.js, FastAPI, and Cloud Architecture**. Proven track record building high-throughput automation engines, multi-tenant SaaS platforms, and secure transaction workflows with a focus on core web vitals, fault tolerance, and absolute system scalability.

CORE SKILLS

Frontend:	React.js, Next.js, JavaScript, TypeScript, Shadcn UI, React Query, Redux
Backend:	Node.js, Express.js, Django, Django REST Framework (DRF), RESTful APIs
Cloud & DevOps:	AWS Lambda, AWS App Runner, Docker, Containerization, CI/CD Pipelines
Databases:	PostgreSQL, Prisma ORM, SQLAlchemy, Django ORM, Vector Databases
AI / LLM Orchestration:	RAG Pipelines, Ollama, Prompt Engineering, Token Streaming, Local Inference
Mobile & Tools:	React Native, Expo, NativeWind, Git, GitHub
Concepts:	System Design, Distributed Systems, Multi-Tenancy, Webhooks, RBAC, SSR/SSG, SEO

PROFESSIONAL EXPERIENCE

Full Stack Engineer **13 Oct 2025 - 1 May 2026**
Ecomoney Insurance Broker *Gurugram, Haryana*
Live Link

- **Designed and deployed serverless backends** using **AWS Lambda** and **AWS App Runner**, minimizing infrastructure overhead and ensuring auto-scaling capacity during heavy traffic fluctuations.
- **Containerized 4 core application modules via Docker**, improving deployment cycle velocity by 25% and completely eliminating cross-environment configuration variance.
- **Architected secure financial infrastructure** by integrating **Razorpay with Webhook verification**, ensuring 100% real-time transaction data consistency and automated state reconciliation.
- **Developed an event-driven automation layer** leveraging custom worker scheduling pools (**Cron Jobs**) to process asynchronous notification pipelines, reducing server database overhead by 15%.
- **Architected fault-tolerant API gateways** for enterprise systems (**Bajaj Allianz & Care Health**), implementing strict validation protocols, custom error handling, and robust webhook consumer logic.

Full Stack Developer **March 12, 2024 - 06 oct 2025**
PCI Infotech (Singapore) *Remote*

- **Architected and deployed scalable enterprise web applications** using **Next.js**, **React.js**, and TypeScript within production-driven agile environments.
- **Streamlined frontend application rendering paths**, enhancing core web vitals and boosting page load speeds by 30% through aggressive code splitting and asset layout configurations.
- Collaborated fluidly with cross-functional engineering teams to translate complex wireframes into scalable frontend ecosystems.
- **Implemented advanced SEO strategies** and Server-Side Rendering (SSR) engines within Next.js frameworks to enhance overall production crawling and indexing efficiency.

Frontend Developer **Jun 8, 2023 - Mar 6, 2024**
BlackCap IT *Jammu*

- **Constructed 15+ high-performance cross-browser user interfaces** using modern JavaScript environments, reducing layout shifting metrics by 20%.
- **Enhanced component lifecycle execution speeds** by building modular layout systems and dynamic UI structures to expand overall feature delivery velocity by 15%.

Backend Engineering Intern **April 2023 - May 2023**
Auctopus Technology *Remote*

- **Architected 10+ core RESTful API endpoints** and secure data layer abstractions using Django and Django REST Framework, reducing client payload delivery times by 25%.
- **Executed 5+ complex relational database schema migrations** and tuned validation rules, accelerating backend query execution speeds by 40%.

PROJECTS

Open Source RAG Platform

- **Architected a high-availability Retrieval-Augmented Generation (RAG) platform** using a decoupled monorepo pattern powered by **FastAPI** and **Next.js**.
- **Designed high-throughput document ingestion pipelines** managing parsing logic, semantic paragraph chunking, and vector retrieval, improving query accuracy results by 20%.
- **Orchestrated deterministic containerized configurations via Docker**, capping memory limits to execute local model execution flows (**Ollama**) safely under concurrent request spikes.

Automation OS — Workflow Automation Platform

- **Built a plugin-based workflow automation engine** using **FastAPI**, supporting JSON-defined workflows, directed execution graphs, configurable retries, execution context, and node-level execution tracking.
- **Developed extensible third-party integrations** for **LinkedIn and Telegram**, implementing OAuth-based account connections, social-media publishing, webhook triggers, messaging, and automated replies.
- **Integrated LLM-powered workflow nodes** using **LangChain/LangGraph** to generate and transform content, enabling automated pipelines such as **AI content generation → processing → social-media publishing**.

Local AI Chat Mobile Application Live Link

- Built a cross-platform mobile architecture to establish fully offline, local **on-device LLM inference** runtime operations.
- Integrated **MLC LLM** engines to establish real-time token streaming pipelines integrated with Vercel AI SDK wrappers.
- Refined sampling parameters, context execution boundaries, and memory limits to maximize execution speed on low-compute physical devices.

AI Writing Assistant Chrome Extension

- Built a Manifest V3 text-optimization architecture utilizing internal messaging pipelines to secure predictable data formatting states.
- Developed floating interface layouts powered by React state variables and native pointer interactions.

EDUCATION

Bachelor of Science (B.Sc) **2017 - 2020**
Cluster University of Jammu
Advanced Professional Upskilling (2021–2022): Dedicated structural focus on full-stack architecture design patterns, distributed backend infrastructure implementation, and server orchestration protocols through comprehensive, hands-on enterprise-level engineering tracks.
